Q-Pearl Pearlizing Agent Liquid Form

Q-Pearl is a special surfactant blend designed to be easily incorporated into products using a cold blend, thus imparting a pearl like effect.

Typical use level in a blend is 2.5% to 3.0%, although good pearlization can be achieved at 1-5% levels.

This substance is a mixture of many individual substances and cannot be adequately represented by a single molecular structure

Sodium Olefin Sulfonate 40% Liquid Form

CAS # [68439-57-6] CHNaO_3
84.007

This product is an ideal surfactant for a variety of detergent and personal care applications including hand soaps, shampoos, and bath products. It offers the formulator excellent viscosity and foam characteristics, as well as improved mildness over lauryl sulfates. It is more stable than alcohol sulfates over a broad pH range.

Sodium Coco Sulfate

Flake Form

Sodium Coco Sulfate is a naturally derived alternative to Sodium Lauryl Sulfate in flake form. Sodium Coco Sulfate is derived from pure coconut oil. It can be used in a wide variety of personal care applications in which viscosity building and foam characteristics are of importance. The product formulates similar to synthetic alkyl sulfates, but is less defatting to the hair and skin. SCS being less soluble than synthetic alkyl sulfates leaves the skin and hair with a conditioned feel. It can be incorporated into shampoos, hand soaps, bath products, shaving creams and medicated ointments. It is especially useful for opaque, pearlescent, or cream products.

Sodium Percarbonate

Fine Granular Form

CAS # [15630-89-4]

Hazardous Material Waiver Required

Sodium Percarbonate is a white free flowing granular chemical used in the formulation of laundry products and many other cleaning products. It provides powerful cleaning, bleaching, stain removal capabilities- yet it's environmentally compatible. It will break down into water, oxygen, and soda ash.
