

Practical Uses for Propylene Glycol

Our Warning! We have not tested every formulation that we list. This list is strictly for informational purposes and a guideline to various detergent, cosmetic and coating formulations. This information is provided without warranty of any kind or fitness for a particular use or purpose. You are encouraged to conduct your own tests. Read all labels and MSDS Sheets.

Activator Solution for Humidors

Typically a 50/50 solution of propylene glycol and distilled water is used. When making smaller quantities a simple volume measurement can be used.

For the real sticklers in the crowd, when making larger solutions please keep in mind that propylene glycol is slightly heavier than water. Propylene Glycol is 8.61 pounds per gallon while water is 8.34 pounds per gallon. Therefore mixing 1 gallon of Propylene Glycol with 1 Gallon of water will give a 51% solution of propylene glycol.
